

ET tube displacement

This scenario will focus on the deterioration of a 30 week gestation ventilated baby girl called Hiba. The ET tube has displaced. Participants will need to troubleshoot using the DOPE algorithm to determine the problem.

Preparation

For the scenario you will need to prepare a manikin in an incubator. The manikin will need to be intubated with a size 3.0 ET tube and connected to a ventilator. The manikin will have an IV cannula and NGT in place. An ITU chart will need to have been started with the length and size of ET tube documented on.

Scenario requirements

Role	Notes
Facilitator/s	Leads scenario and refers to Facilitation Aide Memoirs
Allocate observer/s	Minimum 2 (Human Factors & Clinical checklist). Expected to contribute to debrief
Allocate team roles	Doctor/ANNP Nurse
